

# Release notes Alarmed+

## *Version 0.3*

This is the third release of the application *Alarmed+*.

### **Description**

*Alarmed+* is an application for setting alarms and shutting them off by solving fun and interesting tasks. A mathematical task, a logic task or maybe completing a game. *Alarmed+* takes your boring alarms to the next level. In *Alarmed+* you can:

- Create multiple alarms.
- Chose between different tasks to shut off the alarm.
- Chose if the alarm is going to recur.
- Chose alarm tone and volume

### **New features in this release:**

You can now:

- Chose alarm tone
- Set the volume
- Chose if you want vibration or not

### **Known bugs:**

- Doesn't return to the current application after the alarm is activated and then deactivated. (#5)

### **Fixed bugs:**

We fixed:

- Duplicate alarm tones and vibration when one alarm is activated and another alarm activates. (#4)
- Selecting MathModule is still selecting MemoryModule. (#10)
- Notification remains even though no new alarm is scheduled. (#11)
- The sound of the alarm is silenced directly. (#12)
- Default volume and vibration settings are wrong. (#13)

### **Limitations:**

None
