

Review notes

Sprint 5

Accepted items in backlog:

- As a user I want to be able to choose different alarm tones
- As a user I want to be able to choose if the phone should vibrate or just play an alarm tone or both
- As a user I want to be able to interact with the program easily
- Fixing bugs
 - #4

Unaccepted items in backlog:

- Fixing bugs
 - #5

Demo:

The application meets all the demands in our product backlog, and with our last sprint the user is now able to browse all their ringtones and pick their favorite tone as alarm tone. The user is now also able to select the desired ringtone volume or if the phone only should vibrate. We have also improved the user interface since the last sprint.

Notes:

We managed to fix all the known existing bugs except #5 (see <https://github.com/rekoil/DAT255-EpiClock/issues>).

For more information about the definition about the item able to interact with the program easily see the sprint backlog.
