

Release notes Alarmed+

Version 0.2 (Alpha TWO!)

This is the second release of the application *Alarmed+*.

Description

Alarmed+ is an application for setting alarms and shutting them off by solving fun and interesting tasks. A mathematical task, a logic task or maybe completing a game. *Alarmed+* takes your boring alarms to the next level. In *Alarmed+* you can:

- Create multiple alarms
- Chose between different tasks to shut off the alarm
- Chose if the alarm is going to recur

New features in this release:

You can now:

- Create recurring alarms
- Chose between two different alarm tasks.
- Shut off the alarm with a memory module
- Set the alarm volume
- Get a notification when an alarm is set that shows the next enabled alarm
- Solve three new mathematical problems in the math module

Known bugs:

- Duplicate alarm tones and vibration when one alarm is activated and another alarm activates.
- Doesn't return to the current application after the alarm is activated and then deactivated.

Fixed bugs:

We fixed:

- User can lower the volume of the alarm when it's activated.
- When finishing MathTask the next "equation" was showing for a short while.

Limitations:

- Application only uses the system default alarm tone.
