Release notes Alarmed+

Version 0.1 (Alpha ONE!)

This is the first release of the application *Alarmed+*.

Description
Alarmed+ is an application for setting alarms and shutting them off by solving fun and interesting tasks. A mathemetical task, a logic task or maybe completing a game. *Alarmed+* takes your boring alarms to the next level. In *Alarmed+* you can:
- Create multiple alarms
- Shut off alarms by solving a task

New features in this release:
You can now:
- Create multiple alarms
- Delete alarms
- Disable alarms
- Edit the time for alarms
- Shut off the alarms by solving a mathematical task

Known bugs:
- User can lower the volume of the alarm when it's activated.
- Duplicate alarm tones and vibration when one alarm is activated and another alarm activates.
- Doesn't return to the current application after the alarm is activated and then deactivated.

Fixed bugs:
We fixed:
- That the device didn't wake up when alarmed activated.
- That the application showed the wrong text when an alarm is set one minute past the current time.

Limitations:
- Only one module to unlock the alarm.
- Cant schedule alarms to occur on a later date than tomorrow
